## **WHY I CHOOSE BOND FOR EXTERNAL CLADDING SYSTEM IN MY BUILDING**

1. BOND offers permanent and integrated architecture solution.
2. BOND can easily be cut and shaped to the contours of the building with a perfect adaptability.
3. BOND offering elegant surfaces and large range of stains are factors that change the tone of the building with long-term impression.
4. BOND his success of the resistance against corrosion.
5. BOND is friendly to the environment, does not release any substance containing CFCS and is recyclable.
6. Any building that need a renovation quickly and cost-effectively it delivers a new face on the outer side and long-term protection of the building from weather.
7. BOND protects the building from erosion and harmful effects caused by the industrial and environmental pollution, leading to low cost maintenance and long-term maintenance of the structure of the building.
8. The rear-air system investment protects masonry building from humidity, high temperature fluctuations and quick, with the result of thermal expansion, contraction and reduction in-formation of cracks.
9. BOND through the use of exclusive colors and innovative forms, offer compelling solutions for creating unique indoor (banks, trade fairs, reception areas, airports, etc.).
10. Has accepted scientific that a building with single masonry if you put external cladding system with BOND and insulated exterior thermal insulation we have the same effect with double masonry.
